FAQ (Frequently Asked Questions)

1. Do you have machines in stock?

Sorry, we do not have any ready machines to sell. Every inquiry has their specific demand and requirements. It is very important for us to help you select the most suited technology and machine configurations. However, for some applied industries, we have standard models to offer, which can be delivered in as short as 12~16 weeks. In some cases, for a custom made system, manufacturing cost is higher and so are delivery times.

2. How to build a customized coating machine?

Royal Technology designs and manufactures customized PVD/PECVD coating machines to meet every customer special demands: coating processes and productivity. The customized system's quality can be guaranteed as same as the standardized models.

Key Configurations

Code	Name	Description
1	Deposition Chamber	A: Chamber size, shape and material B: Chamber surface treatment request
2	Pumping System	A: Fore-vacuum pumps: Leybold, Edward, Pfeiffer, China made brands are available or other brands you prefer to use. B: High vacuum pumps: turbo molecular pump, oil diffusion pump, magnetically suspension molecular pumps for options.
3	Deposition Sources	A: Arc cathodes B: Magnetron sputtering cathodes : -Planar/cylindrical or both -DC/MF power supply or both C: Thermal evaporation sources: E-beam/crucible/boat/filament etc.
4	Plasma Bombardment Cleaning System	A: Linear ion source B: Hall ion source C: Pulsed bias power supply

And other requests on demands please share with us your ideas, we are honored to build your desired coating machines
